

## Sales

NCompass provides a highly flexible and powerful sales system, which can either complement or completely replace your existing electronic or manual system. You can choose to use the system only for expensive items, to use it in conjunction with your existing system, or to completely replace your till and even credit card terminal. Even in the latter case, you may wish to take advantage of this flexibility to smooth the transition into the new system one step at a time.

Features of the Sales module include:

- Rapid stock search system, with automatic or manual serial-number selection
- Multiple customisable payment methods, with any combination of types on each sale, and automatic change calculation
- Support for non-stock items such as Installation or Delivery charges
- Support for Discounting, with enforced reasons, and full discount reporting
- Automatic Discounting for special offers, including time-limited offers
- Support for both customer ledger and third-party finance
- Track Cheque on Delivery payments to ensure you get paid
- Salesperson tracking, with option to show or hide the details on printed receipts
- Automatic Invoice numbers can be overridden for easy integration with a manual system or conversion from an old EPOS system
- Multiple sales active simultaneously - switch between them with a simple click - ideal for sharing a workstation on the shop-floor
- Use either Delivery Notes or the full Delivery Scheduler
- Customisable automatic Invoice duplicates, such as for Customer and Accounts
- Extended warranty support with multiple custom schemes per product, pricing by product, and expiry date tracking
- End of Day reports (X and Z reports), with both category and payment type splits, and individual payment list if required
- Powerful Sales Enquiry system allows any order or invoice generated by the system to be located using any combination of customer, product, customer order number, and order/invoice number or date range. The invoice can then be viewed on-screen or re-printed, optionally marked as a duplicate

- High-speed thermal receipts, including your own logo(s) if required
- Full bar-code scanner support for rapid sales
- Customer pole display and cash drawer support
- Printed Ledger MiniStatements giving customers a complete history of recent activity on their ledger account, helping them keep track of how much they owe
- Quick Sale – Scan an item to start a new Sale
- Delivery Tickets from the Field Calls system
- All invoices and receipts are bar-coded for instant lookup later
- A4 invoices include Customer ID bar-code – just scan to see full details of the customer, including their purchase, credit, service and rental histories
- Selects A4 or thermal receipt output automatically, with one-click over-ride
- A4 Invoices print direct to almost any Windows® printer, even over a network
- Email PDF invoices and statements
- Deferred sales (layaways) allow you to capture customer and product details on the shop floor, then take payment for the sale at a till point

## Other Features

- Fully automatic email submission of GfK Returns for GfK Panel Members
- Email electronic late solicitation reports for warranty providers
- Print your own price and bar-code labels
- Multiple sales simultaneously on a single terminal and across network
